

FNPCT

VO.3 2013/04/16

footnote kerning

Clemens NIEDERBERGER

<https://bitbucket.org/cgnieder/fnpct/>
contact@mychemistry.eu

English documentation

The **FNPCT** package basically does two things to footnotes: if footnote marks are followed by a punctuation mark the order of footnote and punctuation mark is reversed and the kerning gets adjusted. As a side effect a new method of creating multiple footnotes and some other features are provided.

1 License and Requirements

Permission is granted to copy, distribute and/or modify this software under the terms of the L^AT_EX Project Public License, version 1.3 or later (<http://www.latex-project.org/lppl.txt>). The package has the status “maintained.”

FNPCT depends on the packages l3kernel, xparse, l3keys2e and scrfile.

2 What’s it all about?

2.1 Introduction

The purpose of this package is to offer kerning for footnote marks, i.e. the superscripts. This is not appropriate for all superscripts. Symbols must be handled differently than numbers. And of course the amount depends on the chosen font. Robert Bringhurst says in *The Elements of Typographic Style*:

Superscripts frequently come at the ends of phrases or sentences. If they are high above the line, they can be kerned over a comma or period, but this may endanger readability, especially if the text is set in a modest size. *The Elements of Typographic Style* [Brio4]

FNPCT can not make this decisions for you. It sets some initial values for the comma and the full stop which looked good to me with the tested fonts. Additionally it kerns the superscripts away from words when it follows directly. The amounts of the kerning can be changed using an option.

As a side effect **FN**PCT switches the order of the superscript and the following comma or full stop. Additional punctuation marks can be added to the switching behaviour and the amount of kerning can be set for each punctuation mark individually.

2.2 Basics

The **FN**PCT package basically does two things to footnotes: if footnote marks are followed by a comma or a full stop¹ the order of footnote and punctuation mark is reversed and the kerning gets adjusted. As a side effect a new method of creating multiple footnotes^{2,3} is provided, see section 4 for details.

In what way is the kerning adjusted? After being placed behind the punctuation mark the footnote mark is moved a little bit back, namely by the amount specified with the option **after-punct-space** (see section 3). If the footnote mark follows a word *without* being followed by a punctuation,⁴ there (obviously) is no order switching and a little space is inserted before the footnote mark, namely the amount specified by the option **before-footnote-space** (see section 3).

All examples in this documentation use

```
\renewcommand\thempfootnote{\arabic{mpfootnote}}.
```

¹ More punctuation marks can be added through a package option. ² like ³ this ⁴ Well, it does not necessarily have to follow a *word*. The important point is *not being followed* by a punctuation mark.

Now, let's see some action:

```
1 \begin{minipage}{.4\linewidth}
2 \noindent The three little pigs built their houses
3 out of straw\footnote{not to be confused with hay},
4 sticks\footnote{or lumber according to some sources}
5 and bricks\footnote{probably fired clay bricks}.
6 \end{minipage}
```

The three little pigs built their houses
out of straw,¹ sticks² and bricks.³

¹ not to be confused with hay

² or lumber according to some sources

³ probably fired clay bricks

To ensure that the kerning is set the right way the footnote *must* be placed *before* the full stop or the comma. *The command can look ahead but not look back.* This means if you place the `\footnote` command after a full stop or a comma it is treated as if following a word, i.e. a thin space is inserted: effectively the opposite of the desired behaviour.

The order-switching can be prevented using a package option since not all countries and languages have the same typographic conventions. In this case the full stop and the comma are moved a bit back.

without <code>FN PCT</code>	with <code>FN PCT</code>
text. ¹	text. ¹
text ¹ .	text ¹ .

FIGURE 1: The effect of `FN PCT`.

`punct-after = true|false`

Default: false

When true the punctuation sign will be placed *after* the footnote.

Like all options it can also be set using the setup command.

`\setfnpct{<options>}` Set up options. Can be used anywhere in the document. Some options can only be set in the preamble, though.

```
1 \setfnpct{punct-after}
2 \begin{minipage}{.4\linewidth}
3 \noindent The three little pigs built their houses
4 out of straw\footnote{not to be confused with hay},
5 sticks\footnote{or lumber according to some sources}
6 and bricks\footnote{probably fired clay bricks}.
7 \end{minipage}
```

The three little pigs built their houses
out of straw¹, sticks² and bricks³.

¹ not to be confused with hay

² or lumber according to some sources

³ probably fired clay bricks

2.3 Temporarily disable or enable switching

One maybe want to put some footnote marks *before* the punctuation and some after, for example because the first one describes a single word but the second one a whole sentence. For this purpose **FN**PCT adds a `*` argument to `\footnote` and `\footnotemark`. The complete new syntax now is as follows:

`\footnote*{<num>}{<footnote text>}<tpunct>`

new `*` argument added. `<tpunct>` is the optional trailing punctuation mark.

`\footnotemark*{<num>}<tpunct>`

new `*` argument added. `<tpunct>` is the optional trailing punctuation mark.

The `*` argument temporarily turns off the punctuation/footnote switching. In case you set `punct-after = true` the `*` argument temporarily *enables* the switching.

```
1 \begin{minipage}{.4\linewidth}
2 \noindent The three little pigs built their houses
3 out of straw\footnote*{not to be confused with hay},
4 sticks\footnote{or lumber according to some sources}
5 and bricks\footnote{probably fired clay bricks}.
6 \end{minipage}\hfil
7 \setfnpct{punct-after}
8 \begin{minipage}{.4\linewidth}

10 out of straw\footnote*{not to be confused with hay},
11 sticks\footnote{or lumber according to some sources}
12 and bricks\footnote{probably fired clay bricks}.
13 \end{minipage}
```

The three little pigs built their houses
out of straw¹, sticks² and bricks³.

¹ not to be confused with hay

² or lumber according to some sources

³ probably fired clay bricks

The three little pigs built their houses
out of straw,¹ sticks² and bricks³.

¹ not to be confused with hay

² or lumber according to some sources

³ probably fired clay bricks

3 Options

Most package options are listed below. They all can be set as a package option or with the `\setfnpct` command. Most of them are for adjusting the kerning.

Underlined values are set if the option is used without value.

add-punct-marks = <mark>[<space after>][<space before>
 add another punctuation mark for the position switching and specify kerning if necessary. An existing entry will be overwritten. This option accepts a list of marks.

remove-punct-marks = <mark>
 remove punctuation mark from the kerning/position switching behaviour. This option accepts a list of marks.

after-dot-space = <dim> Default: - .06em
 space to be inserted after a footnote mark and before the full stop (“footnote *after* dot”). A negative space will move the full stop further to the footnote mark.

after-comma-space = <dim> Default: - .06em
 space to be inserted after a footnote mark and before the comma (“footnote *after* comma”). A negative space will move the comma further to the footnote mark.

after-punct-space = <dim>
 set *all* spaces, i.e. also the ones for marks you’ve added with **add-punct-marks**.

punct-after = true|false Default: false
 when true the punctuation sign will be placed *after* the footnote.

before-dot-space = <dim> Default: - .16em
 space to be inserted after a footnote mark and before the full stop (“footnote *before* dot”), i.e. with **punct-after** = true.

before-comma-space = <dim> Default: - .16em
 space to be inserted after a footnote mark and before the comma (“footnote *before* comma”), i.e. with **punct-after** = true.

before-punct-space = <dim>
 set *all* spaces, i.e. also the ones for marks you’ve added with **add-punct-marks**.

before-footnote-space = <dim> Default: .06em
 space to be inserted between a word and the following footnote mark.

dont-mess-around = true|false Default: false
 sets all mentioned lengths to 0pt and **punct-after** = true. Basically this should look like as if you hadn’t loaded **FNPCT** except the multiple footnote commands and **\innernote** are still available, see sections 4 and 5, respectively.

multiple = true|false Default: false
 lets **\footnote** be equal to **\multfootnote**.

mult-fn-delim = <delimiter> Default: ;
 sets the delimiter for the **\multfootnote** command.

mult-fn-sep = <separator> Default: ,
 sets the separator between multiple footnote marks.

`normal-marks = true|false`

Default: `false`

sets the footnote marks in the foot not as superscripts but as normal font. If you're not using a KOMA-Script⁵ class this option will load the package `scrextend`. See section 6 for more information. *This option can only be set in the preamble.*

So if you want to extend the punctuation switching and kerning to other punctuation marks you can do something like this:

```
1 \setfnpct{add-punct-marks=!?}
2 \begin{minipage}{.4\linewidth}
3 \noindent The three little pigs built their houses
4 out of straw\footnote{not to be confused with hay}?
5 Sticks\footnote{or lumber according to some sources}
6 and bricks\footnote{probably fired clay bricks}!
7 \end{minipage}
```

The three little pigs built their houses
out of straw?¹ Sticks² and bricks!³

¹ not to be confused with hay

² or lumber according to some sources

³ probably fired clay bricks

Or with some additional spacing:

```
1 \setfnpct{add-punct-marks=[.03em]?[.03em]}
2 \begin{minipage}{.4\linewidth}
3 \noindent The three little pigs built their houses
4 out of straw\footnote{not to be confused with hay}?
5 Sticks\footnote{or lumber according to some sources}
6 and bricks\footnote{probably fired clay bricks}!
7 \end{minipage}
```

The three little pigs built their houses
out of straw?¹ Sticks² and bricks!³

¹ not to be confused with hay

² or lumber according to some sources

³ probably fired clay bricks

Let's take a look at an example with some ridiculous settings:

⁵ CTAN: KOMA-Script

```

1 % some ridiculous settings:
2 \setfnpct{after-punct-space=2pt,before-footnote-space=2pt}
3 \begin{minipage}{.4\linewidth}
4 \noindent The three little pigs built their houses
5 out of straw\footnote{not to be confused with hay},
6 sticks\footnote{or lumber according to some sources}
7 and bricks\footnote{probably fired clay bricks}.
8 \end{minipage}

```

The three little pigs built their houses
out of straw, ¹ sticks ² and bricks. ³

¹ not to be confused with hay

² or lumber according to some sources

³ probably fired clay bricks

And now the same with switched order:

```

1 % some ridiculous settings:
2 \setfnpct{punct-after,before-punct-space=2pt,before-footnote-space=2pt}
3 \begin{minipage}{.4\linewidth}
4 \noindent The three little pigs built their houses
5 out of straw\footnote{not to be confused with hay},
6 sticks\footnote{or lumber according to some sources}
7 and bricks\footnote{probably fired clay bricks}.
8 \end{minipage}

```

The three little pigs built their houses
out of straw ¹, sticks ² and bricks ³.

¹ not to be confused with hay

² or lumber according to some sources

³ probably fired clay bricks

In case the automatic kerning doesn't work for whatever reason the spaces are available as user commands as well:

`\kfp`

insert the `after-dot-space` or (if `punct-after = true`) the `before-dot-space`.

`\kfc`

insert the `after-comma-space` or (if `punct-after = true`) the `before-comma-space`.

Some of the options are explained in a bit more detail in the next sections.

4 Multiple footnotes

4.1 Basics

Since multiple footnotes have to be treated differently,^{6,7} **FNPCT** provides an extra command for that:

`\multifootnote*{<list>;<of>;<footnotes>}<tpunct>`

different footnotes are separated with a semicolon. The `*` turns the footnote/punctuation switching temporarily off.

```
1 \begin{minipage}{.4\linewidth}
2 \noindent The three little pigs built their houses
3 out of straw\footnote{not to be confused with hay},
4 sticks\footnote{or lumber according to some sources}
5 and bricks\multifootnote{probably fired clay bricks;or
6 something else}.
7 \end{minipage}
```

The three little pigs built their houses
out of straw,¹ sticks² and bricks.^{3,4}

¹ not to be confused with hay

² or lumber according to some sources

³ probably fired clay bricks

⁴ or something else

Every of the items of the list has an optional argument equivalent to the optional argument of `\footnotetext`:

`\multifootnote*{*[<mark>]<footnote text>;...}`

```
1 \begin{minipage}{.4\linewidth}
2 \noindent The three little pigs built their houses
3 out of straw\footnote{not to be confused with hay},
4 sticks\footnote{or lumber according to some sources}
5 and bricks\multifootnote{probably fired clay bricks;[5]or
6 something else}.
7 \end{minipage}
```

The three little pigs built their houses
out of straw,¹ sticks² and bricks.^{3,5}

¹ not to be confused with hay

² or lumber according to some sources

³ probably fired clay bricks

⁵ or something else

⁶ see these footnotes ⁷ for an example

Additionally every item has an optional * which only invokes `\footnotetext`. This enables for example to set nested footnotes without disrupting the multiple setting. The following example is shown in figure 2:

```
1 \documentclass{article}
2 \usepackage[
3   paperwidth=.5\textwidth,
4   paperheight=12\baselineskip,
5   margin=5pt,
6   bottom=1.5cm]{geometry}
7
8 \usepackage{fnpct}
9
10 \begin{document}
11   \noindent The three little pigs built their houses
12   out of straw\footnote{not to be confused with hay},
13   sticks\footnote{or lumber according to some sources}
14   and bricks\multfootnote{probably fired clay bricks%
15   \footnotemark;*or something else;what do I know}.
16 \end{document}
```

The three little pigs built their houses
out of straw,¹ sticks² and bricks.^{3,5}

¹not to be confused with hay
²or lumber according to some sources
³probably fired clay bricks⁴
⁴or something else
⁵what do I know

1

FIGURE 2: nested footnotes

4.2 The delimiter and separator

Since the semicolon might be part of the footnote text you might have some trouble. But there are ways around. Maybe try enclosing it in braces:

```

1 \begin{minipage}{.4\linewidth}
2 \noindent The three little pigs built their houses
3 out of straw\footnote{not to be confused with hay},
4 sticks\footnote{or lumber according to some sources}
5 and bricks\multfootnote{probably fired clay bricks{;}}
6 or something else;what do I know}.
7 \end{minipage}

```

The three little pigs built their houses
out of straw,¹ sticks² and bricks.^{3,4}

¹ not to be confused with hay

² or lumber according to some sources

³ probably fired clay bricks; or something

else

⁴ what do I know

There also are options which lets you choose the (input) delimiter and the (output) separator:

`mult-fn-delim` = <delimiter>

Default: ;

choose delimiter for the `\multfootnote`.

`mult-fn-sep` = <separator>

Default: ,

choose the separator that is put between footnote marks.

```

1 \setfnpct{mult-fn-delim=//,mult-fn-sep=;}
2 \begin{minipage}[t]{.4\linewidth}
3 \noindent The three little pigs built their houses
4 out of straw\footnote{not to be confused with hay},
5 sticks\footnote{or lumber according to some sources}
6 and bricks\multfootnote{probably fired clay bricks;
7 or something else//what do I know}.
8 \end{minipage}\hfil
9 \setfnpct{mult-fn-delim=;,mult-fn-sep=}
10 \renewcommand*\thempfootnote{\fnsymbol{mpfootnote}}
11 \begin{minipage}[t]{.4\linewidth}
12 \noindent The three little pigs built their houses
13 out of straw\footnote{not to be confused with hay},
14 sticks\footnote{or lumber according to some sources}
15 and bricks\multfootnote{probably fired clay bricks;
16 or something else}.
17 \end{minipage}

```

<p>The three little pigs built their houses out of straw,¹ sticks² and bricks.^{3,4}</p> <hr/> <p>¹ not to be confused with hay ² or lumber according to some sources ³ probably fired clay bricks; or something else ⁴ what do I know</p>	<p>The three little pigs built their houses out of straw,* sticks† and bricks.‡§</p> <hr/> <p>* not to be confused with hay † or lumber according to some sources ‡ probably fired clay bricks § or something else</p>
---	---

4.3 Automagic

If you want you can turn all footnotes into `\multfootnotes`.

`multiple = true|false` Default: false
let `\footnote` behave like `\multfootnote`. *This option can only be set in the preamble.*

```

1 % in preamble: \setfnpct{multiple}
2 % or \usepackage[multiple]{fnpct}
3 \begin{minipage}{.4\linewidth}
4 \noindent The three little pigs built their houses
5 out of straw\footnote{not to be confused with hay},
6 sticks\footnote{or lumber according to some sources}
7 and bricks\footnote{probably fired clay bricks;or
8 something else}.
9 \end{minipage}

```

The three little pigs built their houses out of straw,¹ sticks² and bricks.^{3,4}

¹ not to be confused with hay
² or lumber according to some sources
³ probably fired clay bricks
⁴ or something else

5 Nested Footnotes

FNPCT provides preliminary support for nested footnotes. There are some restrictions, though. The command below can be used inside `\footnote` and `\multfootnote`, but not inside another `\innernote`. `\innernote` really is a “inner footnote”, it doesn’t work with endnotes, for example.

`\innernote* [<mark>]{<text><tpunct>`
a nested footnote.

The inner node uses a `\footnotemark` internally and the mark will be set with the definition it has at begin document.

The output of the following code can be seen in figure 3.

```

1 \documentclass{article}
2 \usepackage[
3   paperwidth=.5\textwidth,
4   paperheight=12\baselineskip,
5   margin=5pt,
6   bottom=1.5cm]{geometry}
7
8 \usepackage{fnpct}
9
10 \begin{document}
11   \noindent The three little pigs built their houses
12   out of straw\footnote{not to be confused with hay},
13   sticks\footnote{or lumber according to some sources}
14   and bricks\footnote{probably fired clay bricks%
15     \innernote{or not}}}.
16 \end{document}

```

The three little pigs built their houses
out of straw,¹ sticks² and bricks.³

¹not to be confused with hay
²or lumber according to some sources
³probably fired clay bricks⁴
⁴or not

1

FIGURE 3: `\innernote` example (a)

This is especially useful if you have more than one additional footnote inside a footnote, a case that can't be solved in a satisfying (i.e. automatic) way with the method mentioned in section 4. See figure 4 for the output of this code:

```

1 \documentclass{article}
2 \usepackage[
3   paperwidth=.5\textwidth,
4   paperheight=12\baselineskip,
5   margin=5pt,
6   bottom=1.5cm]{geometry}
7
8 \usepackage{fnpct}
9
10 \begin{document}
11   \noindent The three little pigs built their houses

```

```

12 out of straw\footnote{not to be confused with hay},
13 sticks\footnote{or lumber according to some sources}
14 and bricks\footnote{probably\innernote{just guessing}
15 fired clay bricks\innernote{or not}}.
16 \end{document}

```

The three little pigs built their houses
out of straw,¹ sticks² and bricks.³

¹not to be confused with hay
²or lumber according to some sources
³probably⁴ fired clay bricks⁵
⁴just guessing
⁵or not

1

FIGURE 4: \innernote example (b)

\innernote can also be used to escape minipages. In this case use \innernote as a replacement for \footnote and call this command later:

\writeinnernotes

writes all \footnotetexts to the inner footnotes when invoked. This is usually done automatically by the \footnote command but there are possible needs for it.

See figure 5 for the output of the following code:

```

1 \documentclass{article}
2 \usepackage[
3   paperwidth=.5\textwidth,
4   paperheight=12\baselineskip,
5   margin=5pt,
6   bottom=1.5cm]{geometry}
7
8 \usepackage{fnpct}
9
10 \begin{document}
11   \noindent\fbbox{%
12     \begin{minipage}{.9\linewidth}
13       The three little pigs built their houses
14       out of straw\innernote{not to be confused with hay},
15       sticks\innernote{or lumber according to some sources}
16       and bricks\innernote{probably}.
17     \end{minipage}}\writeinnernotes

```

```

18
19 \end{document}

```

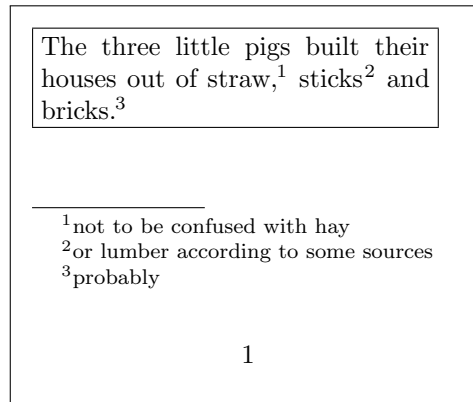

FIGURE 5: `\innernote` example (c)

6 Normal notes

The package option `normal-marks` (see p. 6) changes the layout of the footnote marks in the foot by using KOMA-Script's

```
\deffootnote[<mark indent>]{<indent>}{<par indent>}{<format code>}.
```

The following code is shown in figure 6.

```

1 \documentclass{article}
2 \usepackage[
3   paperwidth=.5\textwidth,
4   paperheight=12\baselineskip,
5   margin=5pt,
6   bottom=1.5cm]{geometry}
7
8 \usepackage[normal-marks]{fnpct}
9
10 \begin{document}
11
12 \noindent The three little pigs built their houses
13 out of straw\footnote{not to be confused with hay},
14 sticks\footnote{or lumber according to some sources}
15 and bricks\footnote{probably fired clay bricks}.
16
17 \end{document}

```

The three indent values used by `FNPECT` can be changed with the following options:

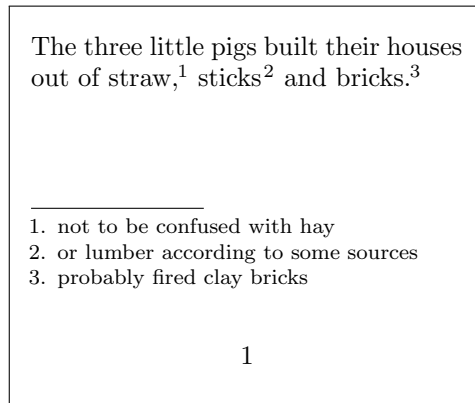

FIGURE 6: Demonstration of the `normal-marks` option.

`normal-mark-width` = <dim>

Default: 1em

The width of the box within which the marks are set.

`normal-indent` = <dim>

Default: 1.5em

The indent of each footnote line *except* the first.

`normal-par-indent` = <dim>

Default: 1em

Additional indent of a new paragraph inside the footnote text.

7 Other packages

FNPCT tries its best to support other footnote and related packages.⁸ Each of the following subsections is dedicated to one of these packages and if and how they work together with **FN**PCT. Fortunately most of them do quite well.

7.1 bigfoot

The bigfoot⁹ [Kas06] package extends the possibilities of the manyfoot¹⁰ package [Roz05] (see section 7.5). The main visible feature is to use different classes of footnotes which are typeset in different apparatus on the bottom of the page.

FNPCT is compatible with bigfoot. You need to be a bit cautious, though. You need to

declare footnotes with `\DeclareNewFootnote` *after* loading **FN**PCT but in the document *preamble*.

Also verbatim material won't work inside footnotes anymore. But you can of course use Bruno Le Floch's cprotect¹¹ if you really need verbatim material in footnotes *and* want to use **FN**PCT. Since **FN**PCT does not redefine any `\footnotetext` like command it will still work inside one of them.

⁸ If you find some package missing please let me know. ⁹ CTAN: bigfoot ¹⁰ CTAN: manyfoot ¹¹ CTAN: cprotect

For every footnote class defined with `\DeclareNewFootnote` the commands `\footnote<class>` and `\footnotemark<class>` are redefined with the starred variant and a `\multfootnote<class>` is defined. The `multiple` option will turn all `\footnote<class>` commands into the corresponding `\multfootnote<class>`.

FN PCT has an additional package option which *cannot* be set with `\setfnpct` and only has any effects if `bigfoot` has been loaded:

`bigfoot-default-top = true|false` → sets the default footnote class as top layer. Default = `false`

Since this document cannot easily combine *every* footnote package at the same time for demonstration purposes the following code is shown in figure 7:

```

1 \documentclass{article}
2 \usepackage[
3   paperwidth=.5\textwidth,
4   paperheight=12\baselineskip,
5   margin=5pt,
6   bottom=1.5cm]{geometry}
7
8 \usepackage{bigfoot}
9 \usepackage[bigfoot-default-top]{fnpct}
10 \setfnpct{multiple}
11 \DeclareNewFootnote[para]{B}{alph}
12
13 \begin{document}
14
15 \noindent The three little pigs built their houses
16 out of straw\footnote*{not to be confused with hay%
17 \footnoteB{let alone grass}}, sticks\footnote{or
18 lumber according to some sources} and bricks%
19 \footnote{probably fired clay bricks;or something}.
20
21 \end{document}

```

7.2 endnotes

The endnotes¹² [Fai12] package provides the commands `\endnote` and `\endnotemark` which can be used to output all notes at the end of a chapter, say.

If the package is loaded both commands are adapted¹³:

```

1 % 'fnpct' does this for you:
2 \AdaptNote\endnote\multendnote
3 \AdaptNoteMark\endnotemark

```

¹² CTAN: endnotes ¹³ see section 8 on manual adaption

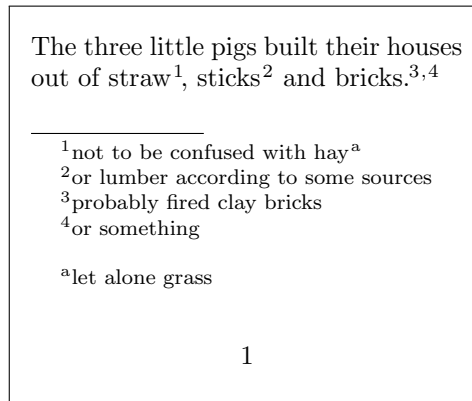

FIGURE 7: bigfoot example

Everything else stays the same:

<pre> 1 \begin{minipage}[t]{.4\linewidth} 2 \noindent The three little pigs built their houses 3 out of straw\endnote{not to be confused with hay}, 4 sticks\endnote{or lumber according to some sources} 5 and bricks\endnote{probably fired clay bricks}. 6 7 \theendnotes 8 \end{minipage}\hfil 9 \begin{minipage}[t]{.4\linewidth} 10 \noindent The three little pigs built their houses 11 out of straw\endnote*{not to be confused with hay}, 12 sticks\endnote{or lumber according to some sources} 13 and bricks\multendnote{probably fired clay bricks;or 14 something else}. 15 16 \theendnotes 17 \end{minipage} </pre>	<p>The three little pigs built their houses out of straw¹, sticks² and bricks.³</p> <p>Notes</p> <p>¹not to be confused with hay ²or lumber according to some sources ³probably fired clay bricks</p>
<pre> 1 \begin{minipage}[t]{.4\linewidth} 2 \noindent The three little pigs built their houses 3 out of straw\endnote*{not to be confused with hay}, 4 sticks\endnote{or lumber according to some sources} 5 and bricks\multendnote{probably fired clay bricks;or 6 something else}. 7 8 \theendnotes 9 \end{minipage}\hfil 10 \begin{minipage}[t]{.4\linewidth} 11 \noindent The three little pigs built their houses 12 out of straw\endnote*{not to be confused with hay}, 13 sticks\endnote{or lumber according to some sources} 14 and bricks\multendnote{probably fired clay bricks;or 15 something else}. 16 17 \theendnotes 18 \end{minipage} </pre>	<p>The three little pigs built their houses out of straw⁴, sticks⁵ and bricks.^{6,7}</p> <p>Notes</p> <p>⁴not to be confused with hay ⁵or lumber according to some sources ⁶probably fired clay bricks ⁷or something else</p>

7.3 enotez

The enotez¹⁴ [Nie12] package provides the command `\endnote` which can be used to output all notes at the end of a chapter, say.

If the package is loaded the command is adapted¹⁵:

```
1 % 'fnpct' does this for you:
2 \AdaptNote\endnote\multendnote
```

7.4 fixfoot

The fixfoot¹⁶ [Faio7] package provides a possibility to create repeating footnotes. **FNPCT** supports this package provided you take care of the following:

Use `\DeclareFixedFootnote` only in the preamble but *after* loading **FNPCT**.

`\DeclareFixedFootnote{\cs}{<footnote text>}` is used to store the `{<footnote text>}` in `\cs` which in turn creates a footnote mark for it but doesn't repeat the footnote text on the same page in the bottom. The document needs several runs to get all the numbers and footnotes right.

Every fixed footnote declared with `\DeclareFixedFootnote` gets an optional `*` to prevent the punctuation switching. *There is no mult-variant of the fixed notes!*

Since this document cannot easily combine every footnote package at the same time for demonstration purposes the following code is shown in figure 8:

```
1 \documentclass{article}
2 \usepackage[
3   paperwidth=.55\textwidth,
4   paperheight=12\baselineskip,
5   margin=5pt,
6   bottom=1.5cm]{geometry}
7
8 \usepackage{fixfoot}
9 \usepackage{fnpct}
10
11 \DeclareFixedFootnote{\myfn}{I'm confused: what do I want to say?}
12
13 \begin{document}
14
15 \noindent The three little pigs\myfn\ built their houses
16 out of straw\myfn*, sticks\footnote{or lumber according
17 to some sources} and bricks\footnote{probably fired clay
18 bricks}.
```

¹⁴ CTAN: enotez ¹⁵ see section 8 on manual adaption ¹⁶ CTAN: fixfoot

```
19
20 \end{document}
```

The three little pigs¹ built their houses
out of straw¹, sticks² and bricks.³

¹I'm confused: what do I want to say?
²or lumber according to some sources
³probably fired clay bricks

1

FIGURE 8: fixfoot example

7.5 footmisc

The `footmisc`¹⁷ package [Fai11] provides a range of options to customize footnotes, for example output them as margin notes or count footnotes per page.

Testing showed no incompatibilities with `footmisc`. The only thing is that you won't have to (and shouldn't) use its `multiple` option.

7.6 footnote

Unfortunately `FNPECT` is not compatible with the `footnote`¹⁸ package [Woo97]. Or more precisely it is not compatible if the command pair `\savenotes/\spewnotes` is invoked. This disables `footnote`'s environments as well as its environment escaping mechanism through `\makesavenoteenv`.

7.7 manyfoot

The `manyfoot` package [Roz05] is not and will not directly be supported. It is loaded by `bigfoot` (see section 7.1), anyway. And since the latter states in its documentation

Purpose of this package is to provide a one-stop solution to almost all problems related to footnotes. You can use it as a drop-in replacement of the 'manyfoot' package, but without many of its shortcomings, and quite a few features of its own. *David Kastrup* [Kas06]

you should probably prefer it anyway.

If it is *really* wanted by users I might change my opinion, though ...

¹⁷ CTAN: `footmisc` ¹⁸ CTAN: `footnote`

7.8 pagenote

The package pagenote¹⁹ [Robo9] is supported and its `\pagenote` command is treated the same way as all other note commands: it got an optional `*` argument and an additional `\multpagenote` is defined.

7.9 parnotes

The function of the package parnotes²⁰ [Hug12] is similar to the endnotes package. basically it allows to output the footnote text after a paragraph, either by using a special environment or by invoking `\parnotes`.

If parnotes is loaded **FN**PCT extends its functionality analogous to the one of endnotes.

Again the **multiple** option turns all `\parnotes` into `\multparnotes`.

```
1 \begin{minipage}[t]{.4\linewidth}
2 \noindent The three little pigs built their houses
3 out of straw\parnote{not to be confused with hay},
4 sticks\parnote{or lumber according to some sources}
5 and bricks\parnote{probably fired clay bricks}.
6
7 \parnotes
8 \end{minipage}\hfil
9 \begin{minipage}[t]{.4\linewidth}
10 \noindent The three little pigs built their houses
11 out of straw\parnote*{not to be confused with hay},
12 sticks\parnote{or lumber according to some sources}
13 and bricks\multparnote{probably fired clay bricks;or
14 something else}.
15
16 \parnotes
17 \end{minipage}
```

The three little pigs built their houses out of straw, ¹ sticks ² and bricks. ³	The three little pigs built their houses out of straw ⁴ , sticks ⁵ and bricks. ^{6,7}
¹ not to be confused with hay ² or lumber according to some sources ³ probably fired clay bricks	⁴ not to be confused with hay ⁵ or lumber according to some sources ⁶ probably fired clay bricks ⁷ or something else

7.10 sepfootnotes

FNPCT supports the sepfootnotes²¹ package [Lim13]. Each note type you have created with with one of the commands

`\newfootnotes{<prefix>},`

`\newendnotes{<prefix>} or`

`\newsymbolfootnotes{<prefix>}`

¹⁹ CTAN: pagenote ²⁰ CTAN: parnotes ²¹ CTAN: sepfootnotes

gets the additional optional `*` to prevent punctuation switching. Also the corresponding mult-variant `\<prefix>multnote` is defined. The option `multiple` again turns all note commands into their mult-variant.

You have to use the `\newfootnotes` commands in the document preamble after loading `FNpCT`.

```

1 % preamble \newfootnotes{a}
2 \anotecontent{first}{not to be confused with hay}
3 \anotecontent{second}{or lumber according to some sources}
4 \anotecontent{third}{probably fired clay bricks}
5 \begin{minipage}{.4\linewidth}
6   \noindent The three little pigs built their houses
7   out of straw\anote{first}, sticks\anote{second} and
8   bricks\anote{third}.
9 \end{minipage}

```

The three little pigs built their houses
out of straw,¹ sticks² and bricks.³

¹ not to be confused with hay

² or lumber according to some sources

³ probably fired clay bricks

7.11 sidenotes

The package `sidenotes`²² [Tho11] is supported and its commands `\sidenote` and `\sidenotemark` are treated the same way as footnotes: they got an optional `*` argument and the additional `\multsidenote` is created. The option `multiple` turns all note commands into their mult-variant.

7.12 snotez

The package `snotez`²³ [Nie13] is supported and its commands `\sidenote` and `\sidenotemark` are treated the same way as footnotes: they got an optional `*` argument and the additional `\multsidenote` is created. The option `multiple` turns all note commands into their mult-variant.

7.13 tablefootnote

The package `tablefootnote`²⁴ [Mün12] is supported and its `\tablefootnote` command is treated the same way as all other note commands: it got an optional `*` argument and an additional `\multtablefootnote` is defined. The option `multiple` turns all note commands into their mult-variant.

²² CTAN: sidenotes ²³ CTAN: snotez ²⁴ CTAN: tablefootnote

7.14 yafoot

Currently no issues are known when using **FNPCT** with one or all of the packages of the yafoot²⁵ [Nak99] bundle. Just for reference: these packages are pfnote, fnpos and dblfnote.

8 Adapting note commands

If a package is not natively supported you can try and adapt commands yourself. You'll need to use one of the following commands. Please be aware that if the adapted command does not match the required syntax it will get the required syntax afterwards. This can result in dummy arguments or an overwritten * argument.

`\AdaptNote{\cs}{\multcs}`

this lets `\cs` adapt to the kerning behaviour and adds an optional *. It also creates a corresponding mult-variant. The package option `multiple` will now turn `\cs` into its mult-variant. Required syntax: `\cs[<oarg>]{<marg>}`

`\AdaptNoteNoMult{\cs}`

like `\AdaptNote` but doesn't create a mult-variant and thus there is no change in behaviour when the option `multiple` is used. Required syntax: `\cs[<oarg>]{<marg>}`

`\AdaptNoteOpt{\cs}{\multcs}`

this lets `\cs` adapt to the kerning behaviour and adds an optional *. It also creates a corresponding mult-variant. The package option `multiple` will now turn `\cs` into its mult-variant. Required syntax: `\cs[<oarg>][<oarg>]{<marg>}`

`\AdaptNoteOptNoMult{\cs}`

like `\AdaptNoteOpt` but doesn't create a mult-variant and thus there is no change in behaviour when the option `multiple` is used. Required syntax: `\cs[<oarg>][<oarg>]{<marg>}`

`\AdaptNoteNoOpt{\cs}{\multcs}`

like `\AdaptNote` but requires `\cs` not to have an optional argument. If it had one it wouldn't have it any more after the adaption. The package option `multiple` will now turn `\cs` into its mult-variant. Required syntax: `\cs{<marg>}`

Introduced in
version 0.3

`\AdaptNoteNoOptNoMult{\cs}`

like `\AdaptNoteNoOpt` but doesn't create a mult-variant. Required syntax: `\cs{<marg>}`

Introduced in
version 0.3

`\AdaptNoteMark{\cs}`

this lets `\cs` adapt to the kerning behaviour and adds an optional *. Required syntax: `\cs[<oarg>]`

`strict = true|false`

Default: false

when true `\AdaptNote` (and the others) will issue errors if the note command in question has already been adapted.

²⁵ CTAN: yafoot

8.1 tufte-latex's side notes

For example using the `\sidenote` command from the tufte-handout²⁶ class is easily possible, see also figure 9:

```
1 \documentclass{tufte-handout}
2 \usepackage[multiple]{fnpct}
3 \AdaptNote\sidenote\multsidenote
4 \begin{document}
5 Some text in the document body\sidenote{Some
6 text in a sidenote.;A second sidenote.}.
7 \end{document}
```

FIGURE 9: Adapt tufte-latex.

8.2 Adapting `\footcite` and siblings

If you're willing to sacrifice `\footcite`'s `*` argument (which it has in some styles) you can adapt the commands provided by biblatex²⁷ as well:

```
1 % used in preamble: \AdaptNoteOpt\footcite\multfootcite
2 \begin{minipage}{.5\linewidth}
3 \noindent The three little pigs built their houses
4 out of straw\footnote{not to be confused with hay},
5 sticks\footnote{or lumber according to some sources}
6 and bricks\footnote{probably fired clay bricks}. The
7 companion has nothing on this topic\multfootcite{[see]
8 [but there's nothing there]companion;[or see][but there's
9 also nothing]knuth:ct:a}.
10 \end{minipage}
```

The three little pigs built their houses out of straw,¹ sticks² and bricks.³ The companion has nothing on this topic.^{4,5}

¹ not to be confused with hay

² or lumber according to some sources

³ probably fired clay bricks

⁴ see GMS94, but there's nothing there.

⁵ or see Knu84, but there's also nothing.

²⁶ CTAN: tufte-handout ²⁷ CTAN: biblatex

The option `multiple` turns all `\footcites` into `\multfootcites` now. Remember that the optional arguments then are inside the braces!

```

1 % used in preamble: \AdaptNoteOpt\footcite\multfootcite
2 % with option 'multiple':
3 \begin{minipage}{.5\linewidth}
4 \noindent The three little pigs built their houses
5 out of straw\footnote{not to be confused with hay},
6 sticks\footnote{or lumber according to some sources}
7 and bricks\footnote{probably fired clay bricks}. The
8 companion has nothing on this topic\footcite{[see][but
9 there's nothing there]companion;[or see][but there's also
10 nothing]knuth:ct:a}.
11 \end{minipage}

```

The three little pigs built their houses out of straw,¹ sticks² and bricks.³ The companion has nothing on this topic.^{4,5}

¹ not to be confused with hay

² or lumber according to some sources

³ probably fired clay bricks

⁴ see GMS94, but there's nothing there.

⁵ or see Knu84, but there's also nothing.
